UNICE BONDOC

Software Developer | AI Automation & Business Systems

Sydney, Australia | uniceabondoc@gmail.com
unicebondoc.com | linkedin.com/in/unicebondoc | github.com/unicebondoc

PROFILE

Software developer and founder of ONQST, delivering AI-assisted applications, automation and interactive products. I connect product requirements with usable workflows, interfaces, testing and release documentation, alongside software delivery in a ten-person ACS WIL team. My work includes household collaboration, reflection tools, property operations and Mac-hosted automation, with clear distinctions between tested features and public releases.

RELEVANT STRENGTHS

- **Business and delivery:** stakeholder coordination, operational documentation, product requirements, workflow improvement and user-focused testing.
- **AI and automation:** ChatGPT/Codex, Claude, Hermes, API-connected workflows and human approval steps for consequential actions.
- **Project technologies:** Python, JavaScript, React, TypeScript, SQL, Supabase, Git and AWS. Used in AI-assisted project delivery; examples below.

RELEVANT EXPERIENCE

Developer / Programmer - ACS WIL Internship (CauseConnect)

July 2026 - Present | Internship team of 10

- Contribute campaign homepage, detail and account-related interface work to a team application for discovering social-awareness campaigns.
- Prepare regression checks, setup guidance and demonstration documentation; coordinate with teammates responsible for backend and authentication services.
- Test frontend and local integration behaviour while documenting that the hosted demonstration uses sample data and cloud API integration remains in progress.

Founder & Builder - ONQST

Mar 2026 - Present | Independent product studio | onqst.com

- Direct product scope, user journeys and release preparation for web applications and interactive experiences, using AI-assisted development tools.
- Translate everyday needs into features such as household invitations, permissions, shared bills, reflection journals and account recovery.
- Coordinate implementation, review test results and prepare release documentation, distinguishing prototypes, tested features and public releases.

Software Engineer (Internship) - UNIKRE Trading

Nov 2024 - Jan 2025 | Western Sydney University capstone-linked internship

- Compared AI-generated and human-written storefront content using Python-based analysis in a Shopify commerce setting.

EDUCATION

Master of Information and Communications Technology - Western Sydney University | 2023 - 2025

Professional Year (ICT), ACS Accredited - Performance Education | In progress

Bachelor of Communication (Broadcasting) - Bicol University, Philippines | 2012 - 2016

UNICE BONDOC

Project evidence and supporting experience

SELECTED PROJECTS

Ninja Clan / Hermes - Personal Automation

Personal project | Mac-hosted system

- Configured workflows connecting TickTick tasks, Google Calendar, Telegram and curated Obsidian project knowledge.
- Defined where actions, schedules and durable notes belong, with human approval before consequential external actions.
- Moved the working environment from earlier Linux/VPS infrastructure to a Mac, documenting operating boundaries and continuity for AI-assisted work.

What Was Drawn - Reflection Web App

Public web app | whatwasdrawn.com

- Delivered an AI-assisted product build with touch-based card draws, included reflection text, optional gestures and an account-scoped journal.
- Coordinated the production billing API migration to AWS Lambda/API Gateway and the web hosting move to private S3/CloudFront, with release checks and the public domain preserved.
- Technologies: React, Capacitor, Supabase, MediaPipe, Python and AWS. Native iOS release remains pending.

FlatSync - Shared-Household App

Public web app | flatsync.onqst.com

- Developed a shared-home experience using AI-assisted tools, covering invitations, member permissions, chores, shopping and shared bills.
- Prepared regression coverage for bill calculations, conflicting edits and accessible interactions. Web access is available; native releases remain pending.
- Technologies: React, TypeScript, Capacitor, Supabase and PostgreSQL.

LandLIT - Property Operations Prototype

Working prototype and public fictional-data demo | landlit-preview.vercel.app

- Built an AI-assisted property-operations prototype connecting contracts, rent records, utilities and monthly exports.
- Verified local persistence, controlled registration and encrypted restore. The public demo uses fictional data; deployment for real customers remains pending.
- Technologies: Next.js, React, TypeScript and Drizzle.

EARLIER OPERATIONS EXPERIENCE

SME Account & Loan Operations Manager - RCBC

Sep 2019 - Sep 2022 | Philippines

- Coordinated small-business account and loan operations across relationship managers, compliance teams, documentation and external stakeholders.
