PROFILE

Software developer and founder of ONQST, building applications and interactive experiences through AI-assisted development. My work spans React/TypeScript interfaces, shared data workflows, integration checks, AWS release preparation and Unity game systems. I contribute to a ten-person ACS WIL software team and bring practical experience turning product requirements into tested behaviour and clear technical documentation.

RELEVANT EXPERIENCE

Developer / Programmer - ACS WIL Internship (CauseConnect)

July 2026 - Present | Internship team of 10

- Contribute campaign homepage, detail and account-related interface work to a team application for discovering social-awareness campaigns.
- Prepare regression checks, setup guidance and demonstration documentation; coordinate with teammates responsible for backend and authentication services.
- Test frontend and local integration behaviour while documenting that the hosted demonstration uses sample data and cloud API integration remains in progress.

Founder & Builder - ONQST

Mar 2026 - Present | Independent product studio | onqst.com

- Direct product requirements, user journeys and release preparation for web applications and interactive experiences, using AI-assisted development tools.
- Review implemented behaviour and test results, document limitations and coordinate changes across interfaces, data and hosting services.
- Selected work includes public web apps, a property-operations prototype and an in-development Unity game, with release stages stated separately.

PROJECT TECHNOLOGIES AND WORKING METHODS

- **Web and data:** React, TypeScript, JavaScript, Next.js, Python, REST APIs, SQL, Supabase and PostgreSQL, used in AI-assisted project delivery.
- **Delivery and quality:** Git, Vitest, Playwright, AWS Lambda/API Gateway, S3/CloudFront, CloudFormation/SAM and release documentation.
- **Interactive work:** Capacitor, optional MediaPipe interactions and Unity/C# project exposure. AI tools support implementation; examples and contribution boundaries appear below.

EARLIER OPERATIONS EXPERIENCE

SME Account & Loan Operations Manager - RCBC

Sep 2019 - Sep 2022 | Philippines

- Coordinated small-business account and loan operations across relationship managers, compliance teams, documentation and external stakeholders.

EDUCATION

Master of Information and Communications Technology - Western Sydney University | 2023 - 2025

Professional Year (ICT), ACS Accredited - Performance Education | In progress

Bachelor of Communication (Broadcasting) - Bicol University, Philippines | 2012 - 2016

UNICE BONDOC

Selected software and interactive work

SELECTED PROJECTS

What Was Drawn - Reflection Web App

Public web app | whatwasdrawn.com

- Delivered an AI-assisted build with touch draws, included reflection text, optional gestures and an account-scoped journal using React, Capacitor and Supabase.
- Coordinated the production billing migration to Python AWS Lambda/API Gateway and web hosting to private S3/CloudFront, preserving the public domain and verifying release behaviour. Native iOS review remains pending.

FlatSync - Shared-Household App

Public web app | flatsync.onqst.com

- Developed household invitations, permissions, chores, shopping and shared bills using AI-assisted tools with React, TypeScript, Supabase and PostgreSQL.
- Prepared regression coverage for bill calculations, conflicting edits and accessible interactions. Public web access is available; native releases remain pending.

LandLIT - Property Operations Prototype

Working prototype and public fictional-data demo | landlit-preview.vercel.app

- Built an AI-assisted prototype connecting contracts, rent records, utilities and monthly exports with Next.js, React, TypeScript and Drizzle.
- Verified local persistence, controlled registration and encrypted restore. The public demo uses fictional data; deployment for real customers remains pending.

Steeped - Unity Game in Development

Tested local r13j preview | Unity / C#

- Directed AI-assisted development and review of tea/focus gameplay, save-state recovery and regression checks, preserving existing saves across bounded fixes.
- Prepared and reviewed local build/test evidence. A Mac owner preview is available; physical-device, creative acceptance and public-release work remain pending.

EARLIER TECHNICAL ENGAGEMENT

Software Engineer - UNIKRE Trading

Nov 2024 - Jan 2025 | Western Sydney University capstone engagement

- Compared AI-generated and human-written storefront content using Python-based analysis in a Shopify commerce setting.
